LATISSE™ is an FDA-approved prescription treatment for hypotrichosis used to grow eyelashes, making them longer, thicker and darker. Hypotrichosis is another name for having inadequate or not enough eyelashes. The FDA reviewed clinical study results to verify the identity, potency, purity, and stability of the ingredients, and demonstrated that the product is safe and effective for its intended use if used as prescribed.

If you're considering LATISSE™ (bimatoprost ophthalmic solution) 0.03%, it's important to get all the facts before making any decisions. Like any new product, you're going to have questions about how the treatment works, how soon you'll see results, and, of course, how safe the product is. Please feel free to ask our physicians any questions you may have regarding LATISSE.

Is LATISSE™ right for you?

While most everyone may want the look of longer, fuller and darker lashes, not everyone may be right for the treatment. Your doctor may have to evaluate your medical history to determine if you are a good candidate. You should not use LATISSE™ if you have an active eye condition, including an eye infection, have broken or irritated skin on your eyelid, or are allergic to any of its ingredients. If you are using products for elevated intraocular pressure, you should only use LATISSE™ after consulting with one of our physicians.

Do any of the above conditions apply to you?

YES _____ NO _____ If YES, please explain: _____

What are the side effects?

The most common side effects after using LATISSE™ solution are an itching sensation in the eyes and/or eye redness. This was reported in approximately 4% of patients. LATISSE™ solution may cause other less common side effects which typically occur on the skin close to where LATISSE™ is applied, or in the eyes. These include skin darkening, eye irritation, dryness of the eyes, and redness of the eyelids.

Do you understand these potential side effects as they have been described above?

YES _____ NO _____ If NO, please explain: _____

How to apply:

Like every routine, applying LATISSE™ (bimatoprost ophthalmic solution) 0.03% is all about consistency and precision. Once you follow the basic guidelines, the results will come gradually over time. To see the full effect of your eyelash transformation, take a "before" picture before you start the treatment, and keep taking pictures every 4 weeks to chart your progress. Our staff will provide you with verbal and/or written instructions on how to apply LATISSE.

Do you have any questions about the proper use and application of LATISSE?

YES _____ NO _____ If YES, please explain: _____

Patient Name: _____ Date: _____

Patient Signature: _____

Directions for nightly use:

Step 1

Before Applying

Before applying LATISSE™ each night, ensure your face is clean, makeup and contact lenses are removed, and any other facial care products have already been applied.

Step 2

Prepare the Applicator

Remove an applicator from its tray. Then, holding the sterile applicator horizontally, place one drop of LATISSE™ solution on the area of the applicator closest to the tip but not on the tip.

Step 3

Apply to Skin using Applicator

Immediately draw the applicator carefully along the skin at the base of the upper eyelashes (where the eyelashes meet the skin) just as you would apply liquid eyeliner. This area should feel lightly moist without runoff. NOTE: LATISSE™ solution is intended for use on the skin of the upper eyelid margins at the base of the eyelashes. **DO NOT APPLY** to the lower eyelid.

Step 4

Blot Excess

Blot any excess solution beyond the eyelid with a tissue.

Step 5

Dispose of Applicator

Dispose of the applicator after one use. Repeat for opposite eyelid, using a new sterile applicator to help minimize any potential for contamination from one eyelid to another.
